Volunteers needed for a research study on vision in older adults

UGA researchers are recruiting adult volunteers between the ages of 60-70 for a study on how the brain responds to bright light and how light filtering impacts glare, comfort, and acuity.

Criteria: Between 60-70 years old, uncorrected visual acuity of 20:40 or better, no significant history of ocular disease, able to safely be scanned in an MRI scanner.

A small stipend will be provided as well as a UGA souvenir!
