Mitochondrial Function in Parkinson’s Disease Study

Are you 65 years or older and have not been diagnosed with neuromuscular diseases?

If yes, would you like to participate in a research study conducted by the Non-Invasive Muscle Physiology Lab at The University of Georgia?

Your participation in the study will require maximum two hours of your time.

All procedures in the study are completely non-invasive: no needles, blood or serum samples!

If you are interested in participating or would like more information regarding the study, please contact:
